

Issue with Windows 10

When running the Abaqus 2017 Student Edition on Windows 10 1793 you may see the following installation error dialog.

If so, click the Continue button.

After the installation completes, please follow this instructions:

1. Open an Administrator Command Prompt window.
2. Enter the command:

```
setx /m PATH "C:\SIMULIA\Commands;%PATH%"
```

Where 'C:\SIMULIA' is the Parent installation directory that you specified when you did the Student Edition installation.
3. Close the Administrator Command Prompt window and open a new Command Prompt window.
4. Run the Abaqus commands using just the launcher name:

```
abq2017se cae
```
